OBJECTIVE

Ambitious Computer Engineering student at UIT with strong foundations in OOP, databases, and software engineering. Shipped web and mobile solutions including full-stack Zalo Chat clone (Firebase, Node.js, Express) and university portal application (React Native, Expo). Seeking **Software / Web Developer internship or fresher** roles to apply these disciplines and collaborate in agile international teams.

EDUCATION

University of Information Technology - VNU HCM (UIT) 2023 – 2027 (expected)
Bachelor of Computer Engineering GPA: 7.69/10 | Third-year
Core courses: OOP, Operating Systems, Database Management Systems, Data Structures & Algorithms.

SKILLS

Languages	JavaScript, TypeScript, Python, Java, C/C++, Verilog HDL
Web/Mobile	Node.js, Express, React Native, Expo, HTML5, CSS3, REST APIs
Databases	Firebase Firestore, Realtime Database, SQLite, Supabase
DevOps/Tools	Git/GitHub, Docker, Vercel, npm/pnpm
Core CS	Object-Oriented Programming (OOP), Data Modelling, Agile/Scrum
English	Professional proficiency (working and collaborating in English)

PROJECTS

Zola Chat - Native Android & Node.js Messaging Application Dec 2025 – Present
Java, Node.js, Express, Firebase, WebSockets (Socket.io), Helmet, CORS | GitHub

- Built a full-stack real-time messaging application with a Java-based Android client and Node.js backend.
- Designed Express API with rate-limiting, CORS validation, security configurations (Helmet), and compression.
- Integrated WebSocket communication for instant message updates and synchronized chat lists.
- Formulated database schemas using Firebase for scalable user state and authentication.

UIT Portal App - Cross-platform Mobile Client Jan 2026 – Present
TypeScript, React Native, Expo, REST APIs, Custom HTML Parser | GitHub

- Developed a cross-platform mobile client for the university portal using React Native and Expo.
- Designed a custom, regex-based lightweight HTML parser to extract structured academic data (exam schedules, tuition, grades, announcements) directly from server-rendered tables.
- Built clean, scalable UI layout components matching the 8pt spacing grid system.
- Implemented authentication handlers, token expiry checks, and offline data storage.

GoldTrader Series - Quantitative Algorithmic System Jan 2026 – Present
Python, Scikit-learn, LightGBM, MetaTrader 5, Supabase | Showcase | GitHub

- Created a complete ML trading engine for XAUUSD: data ingestion, regime detection, signal generation, and async Supabase reporting.
- Executed **1,029 live demo trades** (Profit Factor **1.36**, Sharpe **1.2**, net PnL **+$254** on $2,000 capital).

ACHIEVEMENTS & ACTIVITIES

- **3rd Place** - Solana Pragmatic IT Hackathon 2025: Shipped a working product within a 48h sprint with a fully remote team, employing rapid feedback loops.
- **Top 36/100 Teams** - Google Hackathon Vietnam 2025: Engineered an AI decision prototype under strict constraints.
- **Active Member** - WebDev Studios Club (UIT): Conducted knowledge-sharing sessions and hosted technical events for student developers.
